

Future Powertrain Conference

Iker Blanco Ibanez,
JMDSAE student

PARTNERS

The 1st year students of the JMDSAE visited the Future Powertrain Conference

On 28th of February 2019, thanks to the arrangement made by University of Antwerp, we assisted to the Future Powertrain Conference 2019 (FPC2019) event. This event takes place every year close to Birmingham and aims to gather the industry and academic experts to share their vision on the solutions for the future challenges that the automotive industry is facing, particularly within the powertrain field.

Among the presentations that took place that day, we could listen to different perspectives related to electric as the future propulsion system, hydrogen fuel cells for heavy duty applications, connected and autonomous vehicles testing, and electrification of conventional internal combustion engines. All these presented by professionals of well-known companies such as Mahle, E4tech or Ford, and by academics of universities like the University of Bath, Warwick or Loughborough.

Moreover, there were lots of exhibitors in which we could further discuss the topics covered in the presentations and network with some of the most important companies in the sector. It was an incredible experience in which we appreciated how the industry applies many of the topics that were covered during the courses.

But above all, the FTP2019 made us see that the JMDSAE is the master you want to be in if you want to work in the automotive industry of the future.
