

Company visit TREMEC

Tejas Pawar,
JMDSAE student

PARTNERS

The 1st year students of the JMDSAE visited in November the company TREMEC
TREMEC VISIT (12th November, 2018)

We visited TREMEC located at Zedelgem, Belgium, that is approximately 100kms from University of Antwerp. Tremec is mainly known for extreme performance transmissions and mechatronics for passenger, light and heavy duty vehicles. Tremec designs transmission system for EV's and HEV's. After reaching the company we had some snacks and coffee for refreshment. We were briefly introduced about the company's background, products and services via a short presentation. Later, we were taken to the testing labs where the calibration of the powertrain setup was done. The company's representative explained us about the calibration technique and the setup of various powertrains. The company is well known for its Manual and Dual Clutch Transmission. High Speed sports cars companies such as McLaren, Ford Mustang and others are there prime customers. After the company tour we had an interactive session with the interns and department chiefs which also included some questions from my batch mates and those were answered by the employees.
