

Company visit TREMEC

Tejas Pawar,
JMDSAE student

PARTNERS

The 1st year students of the JMDSAE visited in November the company Punch Powertrain.

Punch Powertrain Visit (22nd November, 2018)

Punch Powertrain is an independent full system supplier of fuel efficient powertrains. With over 40 years of experience in the production of Continuous Variable Transmission (CVT's). The company is located in Saint- Truiden (Belgium). They are delivering the CVT's to most of Chinese OEM's and many other manufacturers worldwide. We had a quick chat with our two senior colleagues who were working as an intern in the company. At the start we attended a short presentation that briefed us about the company's growth since past few years, the transformation of drivelines especially the Hybrid Drives such as PHEV. Then we had the company tour where we were introduced to the testing setups of various powertrain systems such as Twin Speed, Twin Motor and some Automatic Transmissions. The visit was really helpful and the company employees acknowledged our questions very well.
